

## **CompanyNewsApp: Use Customerlist**

### **Project Description:-**

You should build a SharePoint Hosted Add-In named CompanyNewsApp. This Add-In will retrieve information from a list in SharePoint named CompanyNewsList. This list should be custom list and should be in a subsite for your developer site collection's root site. The name of the site where the list is created is CompanyNewsSite, which is a Site Site site. The URL and Title of the site should be exactly the same. The list you create should have two custom columns.

You must create the site and list through the browser before you build your app, see instructions under the heading Configuration Configuration.

Read the entire task carefully before you start building the app, and also be careful with the basic requirements under the heading of scoring basic requirements, ie. How your project will be named as well as what is listed under the heading Submission.

Preparatory configuration

Create the CompanyNewsSite site with the following conditions

- Will be a subsite for your developer site collection

O For example, if your developer site collection has URL:

<https://ecusolna.sharepoint.com/sites/JahurulProDev>

Then your subsite must have URL:

<https://ecusolna.sharepoint.com/sites/JahurulProDev/CompanyNewsSite>

- Should be of the team site type
- English language
- Use the top link bar from the parent site = yes

Create list CompanyNewsList

- The list should be created in the site you just created
- The list should be Custom List
- The list should have the name CompanyNewsList
- The following two columns should be created in this list

O Category of type of choice with values

♣ HR

♣ Sales

♣ Marketing

♣ Press

♣ IT

Other settings for this, you do not need to think about now

O Show of the type of choice, with the values

♣ Yes

♣ No

Default value = Yes

Other settings for this, you do not need to think about now

• Add about 10 items in this list via the browser, where you have for each item set different categories and show to yes and no. For example, as shown below:

**Your task:**

**You should now create an SP-Hosted Add-In that displays the five latest news as shown below**
